## Introduction

Magnetic Resonance Imaging (MRI) is one of many imaging modalities used by radiologists to diagnose and treat various conditions within the body. MRI is often favored for its detail and clarity when imaging soft tissues, and doing so without delivering the ionizing radiation inherent with X-ray and CT. Because of the strong, static magnetic field, and varying magnetic and electric fields during scanning, the safety of patients in the MR environment is of great importance to the healthcare professionals who perform these procedures.

Safety concerns arise when a patient has orthopaedic implants manufactured from metal or carbon fiber, or when external fixation devices are in place, because of the potential for movement or heating of the devices in the MR environment. In some cases, safety concerns may be greater due to the type, location, or configuration of the implant or the presence of multiple implants in close proximity to one another. Consequently, the use of MRI technology may not always be possible.

### Purpose

This document will communicate MRI safety information regarding Acumed implants in the MR environment. While we cannot make specific MR claims for all of our implants at this time, Acumed will present the results of our testing in this document as additional information becomes available. When allowed by regulatory authorities, Acumed will use one of the internationally recognized ASTM symbols in our implant labeling.

### Implant Materials

Acumed implants are commonly manufactured from commercial pure (CP) titanium (Ti) and titanium alloys, such as Ti-6Al-4V ELI. A recent FDA article<sup>1</sup> states:

“...[Test] results indicate that for alloys Ti-6Al-7Nb, CP titanium Grades 1 through 4, Ti-6Al-4V ELI, Ti-15Mo, Biodur 108, and Co-28Cr-6Mo ..., magnetically induced force is less than the device weight in any current clinical 1.5, 3.0, and 7.0-T MR system.”

Accordingly, many Acumed devices do not pose significant risk for magnetically induced force or torque. Refer to the device label and Instructions for Use to determine the implant material.

## Terminology

ASTM International is an international standards organization that has published the following voluntary consensus standards for the testing and labeling of devices that may be used in MRI:

- ▶ F2052 Test Method for Measurement of Magnetically Induced Displacement Force on Medical Devices in the Magnetic Resonance Environment
- ▶ F2182 Test Method for Measurement of Radio Frequency Induced Heating On or Near Passive Implants During Magnetic Resonance Imaging
- ▶ F2213 Test Method for Measurement of Magnetically Induced Torque on Medical Devices in the Magnetic Resonance Environment
- ▶ F2503 Practice for Marking Medical Devices and Other Items for Safety in the Magnetic Resonance Environment

ASTM F2503 defines the three classifications for products used in MRI as MR Safe, MR Conditional, and MR Unsafe. Products in these classifications may be labeled with the following symbols:

### MR Safe

MR Safe is an item that poses no known hazards resulting from exposure to any MR environment. MR Safe items are composed of materials that are electrically nonconductive, nonmetallic, and nonmagnetic. The MR Safe icon consists of the letters “MR” surrounded by a green square.

### MR Conditional

MR Conditional is an item with demonstrated safety in the MR environment within defined conditions. At minimum, the conditions of the static magnetic field, the switched gradient magnetic field, and the radiofrequency fields must be disclosed. Additional conditions may be required. The MR Conditional icon consists of the letters “MR” within a yellow equilateral triangle with a thick black band around the perimeter.

### MR Unsafe

MR Unsafe is an item that poses unacceptable risks to the patient, medical staff, or other persons within the MR environment. The MR Unsafe marking consists of the letters “MR” surrounded by a red circle with a diagonal red bar across the letters extending from the upper left quadrant to the lower right quadrant of the circle and oriented at 45° from the horizontal.

*The symbols may appear in black and white when not practical to print in the standard colors.*

## Warnings & Precautions

Unless explicitly stated in this document, Acumed devices have not been tested for heating, migration, or image artifact in the magnetic resonance (MR) environment and the safety of these devices in the MR environment is unknown. Scanning a patient with untested implants may result in patient injury.

Patients with implants should seek a medical opinion before entering the MR environment.

### For Devices That Have Been Tested

#### Warning

- ▶ Failure to follow the specific MR conditions may result in injury to the patient.
- ▶ Unconscious patients or those insensitive to heat or pain may not inform the technologist that the implant is being affected by the MR environment.
- ▶ Long scanning time or higher specific absorption rate (SAR) increases the risk of heating. Pause the scan periodically and solicit feedback from the patient.
- ▶ Unknown and untested implant configurations or the addition of implants from other manufacturers may increase the risks of heating and image artifact.

#### Caution

- ▶ Local transmit coils are not recommended for use on the area with implants as their effects have not been tested.
- ▶ Maximize the distance from the implant to the image area to minimize any potential artifact, when possible.
- ▶ Maximize the distance between the implant and sides of the bore, coils, and conductors to minimize the risk of heating, when possible.
- ▶ The implants have not been assessed for compatibility with MRI systems above 3 Tesla.

#### Important

- ▶ An increase in ventilation through the bore may help to lessen the increase in body temperature during scanning and reduce the effects of implant heating.
- ▶ Nonclinical testing does not account for the variations in MRI systems, pulse sequences, multi-channel RF coils, and local transmit coils that might be used. Some MRI systems have image artifact reduction sequences if imaging near a device is necessary.
- ▶ The use of low field MRI systems (less than 1 T) can mitigate risks for patients with implants by lowering the frequency and SAR.

## IFU and Surgical Technique

Acumed offers Instructions for Use (IFU) and Surgical Techniques to promote the safe and effective use of our systems. Visit [www.acumed.net](http://www.acumed.net) for the most current versions.

Important: IFUs and Surgical Techniques may contain important safety information. They are intended for the Operating Surgeon and supporting Healthcare Professionals.

# Anatomic Radial Head Portfolio

- ▶ Anatomic Radial Head Solutions 2

## Conditions for Safe Scanning in the MRI

A patient with the head or stem implants from the Anatomic Radial Head, Anatomic Radial Head Solutions, and Anatomic Radial Head Solutions 2 systems may be safely scanned at 1.5 T or 3.0 T under the following conditions. Failure to follow these conditions may result in injury to the patient.

## Anatomic Radial Head Portfolio

Parameter	Condition
Nominal values(s) of Static Magnetic Field	1.5 T or 3 T
Maximum Spatial Field Gradient	19 T/m (1900 gauss/cm)
RF Excitation	Circularly Polarized (CP)
RF Transmit Coil Type	Whole body transmit coil, Head RF transmit-receive coil
Maximum Whole Body SAR at 1.5 T and 3.0 T	2.0 W/kg
Limits on Scan Duration 1.5 T	2.0 W/kg whole body average SAR for 15 minutes of continuous RF (a sequence or back to back series/scan without breaks)
Limits on Scan Duration 3 T	2.0 W/kg whole body average SAR for 12 minutes of continuous RF (a sequence or back to back series/scan without breaks)
MR Image Artifact	The presence of this implant may produce an image artifact of 71 mm.
If more information about a specific parameter is not included, there are no conditions associated with that parameter.	

## Anatomic Radial Head System

Sterile Part Number	Non-Sterile Part Number	Description

## Intramedullary Nails Portfolio

- ▶ Polarus® Humeral Rod System
- ▶ Polarus Plus Humeral Rod
- ▶ Polarus 3 Solution (nails)
- ▶ Fibula Rod System
- ▶ Forearm Fracture Solutions (nails)
- ▶ Fibula Nail 2 System
- ▶ Ulna Nail 2 System

### Conditions for Safe Scanning in the MRI

A patient with the nail/rod, screw, washer, end cap, bushing, and set screw implants from the Polarus Humeral Rod, Polarus Plus Humeral Rod, Polarus 3 Solution, Fibula Rod, Forearm Fracture Solutions, Fibula Nail 2, and Ulna Nail 2 Systems may be safely scanned at 1.5 T or 3 T under the following conditions. Failure to follow these conditions may result in injury to the patient.

### Intramedullary Nails Portfolio

Parameter	Condition
Nominal values(s) of Static Magnetic Field	1.5 T or 3 T
Maximum Spatial Field Gradient	19 T/m (1900 gauss/cm)
RF Excitation	Circularly Polarized (CP)
RF Transmit Coil Type	Whole body transmit coil, Head RF transmit-receive coil
Maximum Whole Body SAR at 1.5 T and 3.0 T	2.0 W/kg
Limits on Scan Duration	2.0 W/kg whole body average SAR for 6 minutes of continuous RF (a sequence or back to back series/scan without breaks)
MR Image Artifact	The presence of this implant may produce an image artifact of 24 mm.
If more information about a specific parameter is not included, there are no conditions associated with that parameter.	

### Polarus® Humeral Rod System

Sterile Part Number	Non-Sterile Part Number	Description

## Hand and Wrist Portfolio

- ▶ Acu-Loc® Wrist Plating System
- ▶ Acu-Loc 2 Wrist Plating System
- ▶ Acu-Loc Wrist Spanning Plate
- ▶ Forearm Fracture Solutions (plates)
- ▶ Hand Fracture System
- ▶ Modular Hand System
- ▶ Osteotomy System
- ▶ Total Wrist Fusion Plating System

### Conditions for Safe Scanning in the MRI

A patient with the peg, plate, screw, sleeve, and screw cover implants from the Acu-Loc Wrist Plating, Acu-Loc 2 Wrist Plating, Acu-Loc Wrist Spanning Plate, Anatomic Midshaft Forearm Plating, Hand Fracture, Modular Hand, Osteotomy, and Total Wrist Fusion Plating Systems may be safely scanned at 1.5 T or 3 T under the following conditions. Failure to follow these conditions may result in injury to the patient.

### Hand and Wrist Portfolio

Parameter	Condition
Nominal values(s) of Static Magnetic Field	1.5 T or 3 T
Maximum Spatial Field Gradient	30 T/m (3000 gauss/cm)
RF Excitation	Circularly Polarized (CP)
RF Transmit Coil Type	Whole body transmit coil, Head RF transmit-receive coil
Maximum Whole Body SAR at 1.5 T and 3.0 T	1.0 W/kg*
Limits on Scan Duration	1.0 W/kg whole body average SAR for 15 minutes of continuous RF (a sequence or back to back series/scan without breaks) with 5 minutes of cooling for an hour-long scanning session
MR Image Artifact	The presence of this implant may produce an image artifact of 37 mm.
If more information about a specific parameter is not included, there are no conditions associated with that parameter.	

\*Whole body SAR of 1.0 W/kg may limit the availability and diagnostic quality of some MR procedures

## Screw and Pin Portfolio

- ▶ Acutrak® Headless Compression Screw System
- ▶ Acutrak 2® Headless Compression Screw System
- ▶ Acutrak 3 Headless Compression Screw System
- ▶ AcuTwist® Acutrak Compression Screw System
- ▶ Biotrak® Headless Resorbable Compression System
- ▶ Cannulated Screw System
- ▶ Extremity Screw System
- ▶ Tension Band Pin System/Tension Band Pin System 2

### Conditions for Safe Scanning in the MRI

A patient with the screw, fusion device, helical nail, pin, and washer implants from the Acutrak Headless Compression Screw, Acutrak 2 Headless Compression Screw, Acutrak 3 Headless Compression Screw, AcuTwist Acutrak Compression Screw, Biotrak Headless Resorbable Compression, Cannulated Screw, Tension Band Pin/Tension Band Pin 2, and Extremity Screw Systems may be safely scanned at 1.5 T or 3 T under the following conditions. Failure to follow these conditions may result in injury to the patient.

### Screw and Pin Portfolio

Parameter	Condition
Nominal values(s) of Static Magnetic Field	1.5 T or 3 T
Maximum Spatial Field Gradient	30 T/m (3000 gauss/cm)
RF Excitation	Circularly Polarized (CP)
RF Transmit Coil Type	Whole body transmit coil, Head RF transmit-receive coil
Maximum Whole Body SAR	1.0 W/kg*
Limits on Scan Duration	1.0 W/kg whole body average SAR for 10 minutes of continuous RF (a sequence or back to back series/scan without breaks) followed by a 5 minute cooling period for a one hour session.
MR Image Artifact	The presence of this implant may produce an image artifact of 35 mm.
If more information about a specific parameter is not included, there are no conditions associated with that parameter.	

\* Whole body SAR of 1.0 W/kg may limit the availability and diagnostic quality of some MR procedures

### AcuTwist® Acutrak Compression Screw System

Sterile Part Number	Non-Sterile Part Number	Description
AI-0010-S	AI-0010	10 mm AcuTwist Acutrak Compression Screw
AI-0012-S	AI-0012	12 mm AcuTwist Acutrak Compression Screw
AI-0014-S	AI-0014	14 mm AcuTwist Acutrak Compression Screw
AI-0016-S	AI-0016	16 mm AcuTwist Acutrak Compression Screw
AI-0018-S	AI-0018	18 mm AcuTwist Acutrak Compression Screw
AI-0020-S	AI-0020	20 mm AcuTwist Acutrak Compression Screw
AI-0022-S	AI-0022	22 mm AcuTwist Acutrak Compression Screw
AI-0024-S	AI-0024	24 mm AcuTwist Acutrak Compression Screw
AI-0026-S	AI-0026	26 mm AcuTwist Acutrak Compression Screw
AI-0028-S	AI-0028	28 mm AcuTwist Acutrak Compression Screw
AI-0030-S	AI-0030	30 mm AcuTwist Acutrak Compression Screw

### Biotrak® Headless Resorbable Compression Screw System

Sterile Part Number	Non-Sterile Part Number	Description
30170007-S	N/A	Biotrak 16 mm Screw
30170008-S	N/A	Biotrak 18 mm Screw
30170009-S	N/A	Biotrak 20 mm Screw
30170010-S	N/A	Biotrak 22 mm Screw
30170011-S	N/A	Biotrak 24 mm Screw
30170057-S	N/A	Biotrak Mini 16 mm Screw
30170058-S	N/A	Biotrak Mini 18 mm Screw
30170059-S	N/A	Biotrak Mini 20 mm Screw
30170060-S	N/A	Biotrak Mini 22 mm Screw
30170061-S	N/A	Biotrak Mini 24 mm Screw
30170320-S	N/A	Biotrak 2.0 mm x 20 mm Pin
30170330-S	N/A	Biotrak 2.0 mm x 30 mm Pin
30170340-S	N/A	Biotrak 2.0 mm x 40 mm Pin
55-0001-S	55-0001	Biotrak 20 mm Helical Nail
55-0002-S	55-0002	Biotrak 30 mm Helical Nail
55-0003-S	55-0003	Biotrak 40 mm Helical Nail

## Screw and Pin Portfolio [continued]

### Extremity Screw System

Sterile Part Number	Non-Sterile Part Number	Description
FA-4028-S	FA-4028	4.0 mm x 28.0 mm Cannulated Extremity Screw
FA-4030-S	FA-4030	4.0 mm x 30.0 mm Cannulated Extremity Screw
FA-4032-S	FA-4032	4.0 mm x 32.0 mm Cannulated Extremity Screw
FA-4034-S	FA-4034	4.0 mm x 34.0 mm Cannulated Extremity Screw
FA-4036-S	FA-4036	4.0 mm x 36.0 mm Cannulated Extremity Screw
FA-4038-S	FA-4038	4.0 mm x 38.0 mm Cannulated Extremity Screw
FA-4040-S	FA-4040	4.0 mm x 40.0 mm Cannulated Extremity Screw
FA-4042-S	FA-4042	4.0 mm x 42.0 mm Cannulated Extremity Screw

### Tension Band Pin System / Tension Band Pin System 2

Sterile Part Number	Non-Sterile Part Number	Description
N/A	30-0097	50.0 mm Tension Band Pin
N/A	30-0098	70.0 mm Tension Band Pin
N/A	30-0099	90.0 mm Tension Band Pin
N/A	30-0166	2 mm x 50 mm Tension Band Pin
N/A	30-0167	2 mm x 70 mm Tension Band Pin
N/A	30-0168	2 mm x 90 mm Tension Band Pin

## Shoulder and Elbow Portfolio

- ▶ Elbow Plating System
- ▶ Congruent Elbow Plating System
- ▶ Radial Head Plating System
- ▶ Clavicle Plating System
- ▶ Clavicle Hook Plating System
- ▶ Locking Clavicle Plating System
- ▶ Acu-Sinch® Repair System
- ▶ Dual-Trak Clavicle Screw System
- ▶ Polarus® 3 Solution (plates)
- ▶ Polarus Proximal Humeral Plating System
- ▶ Scapula Plating System

### Conditions for Safe Scanning in the MRI

A patient with the screw, plate, pin, suture anchor, suture retainer, suture, and washer implants from the Elbow Plating, Congruent Elbow Plating, Radial Head Plating, Clavicle Plating, Locking Clavicle Plating, Clavicle Hook Plating, Acu-Sinch Repair, Dual-Trak Clavicle Screw, Polarus 3 Solution, Polarus Proximal Humeral Plating, and Scapula Plating Systems may be safely scanned at 1.5 T or 3 T under the following conditions. Failure to follow these conditions may result in injury to the patient.

### Shoulder and Elbow Portfolio

Parameter	Condition
Nominal values(s) of Static Magnetic Field	1.5 T or 3 T
Maximum Spatial Field Gradient	30 T/m (3000 gauss/cm)
RF Excitation	Circularly Polarized (CP)
RF Transmit Coil Type	Whole body transmit coil, Head RF transmit-receive coil
Maximum Whole Body SAR	1.0 W/kg*
Limits on Scan Duration	1.0 W/kg whole body average SAR for 20 minutes of continuous RF (a sequence or back to back series/scan without breaks) followed by a 3 minute cooling period for a one hour session.
MR Image Artifact	The presence of this implant may produce an image artifact of 37 mm.
If more information about a specific parameter is not included, there are no conditions associated with that parameter.	

\* Whole body SAR of 1.0 W/kg may limit the availability and diagnostic quality of some MR procedures

## Foot and Ankle Portfolio

- ▶ Ankle Plating System
- ▶ Ankle Plating System 3
- ▶ Calcaneal Plating System
- ▶ Forefoot-Midfoot Plating System
- ▶ Small Fragment Base Set

### Conditions for Safe Scanning in the MRI

A patient with the plate, screw, pin, peg, and washer implants from the Ankle Plating, Ankle Plating 3, Calcaneal Plating, Forefoot-Midfoot Plating, and Small Fragment Base Set Systems may be safely scanned at 1.5 T or 3 T under the following conditions. Failure to follow these conditions may result in injury to the patient.

### Foot and Ankle Portfolio

Parameter	Condition
Nominal values(s) of Static Magnetic Field	1.5 T or 3 T
Maximum Spatial Field Gradient	19 T/m (1900 gauss/cm)
RF Excitation	Circularly Polarized (CP)
RF Transmit Coil Type	Whole body transmit coil, Head RF transmit-receive coil
Maximum Whole Body SAR	2.0 W/kg or 1.0 W/kg*
Limits on Scan Duration	2.0 W/kg whole body average SAR for 5 minutes of continuous RF (a sequence or back to back series/scan without breaks) / 1.0 W/kg whole body average SAR for 15 minutes of continuous RF (a sequence or back to back series/scan without breaks)
MR Image Artifact	The presence of this implant may produce an image artifact of 42 mm.
If more information about a specific parameter is not included, there are no conditions associated with that parameter.	

\*Whole body SAR of 1.0 W/kg may limit the availability and diagnostic quality of some MR procedures

# Hip and Pelvic Portfolio:

## ► Pelvic Plating System

### Conditions for Safe Scanning in the MRI

A patient with the plate and screw implants from the Pelvic Plating System may be safely scanned at 1.5 T or 3 T under the following conditions. Failure to follow these conditions may result in injury to the patient.

### Hip and Pelvic Portfolio

Parameter	Condition
Nominal values(s) of Static Magnetic Field	1.5 T or 3 T
Maximum Spatial Field Gradient	19 T/m (1900 gauss/cm)
RF Excitation	Circularly Polarized (CP)
RF Transmit Coil Type	Whole body transmit coil, Head RF transmit-receive coil.
Maximum Whole Body SAR [W/kg]	2.0 W/kg
Limits on Scan Duration	2.0 W/kg whole body average SAR for 13 minutes of continuous RF (a sequence or back to back series/scan without breaks)
MR Image Artifact	The presence of this implant may produce an image artifact of 28 mm.
If more information about a specific parameter is not included, there are no conditions associated with that parameter.

## External Fixation Systems

- ▶ Stableloc External Fixation System
- ▶ Small Bone Distractor
- ▶ Small Bone Fixator

The Small Bone External Fixation System (Small Bone Distractor and Small Bone Fixator) and the Stableloc External Fixation System (shown below) are MR Unsafe.

### MR Unsafe

A patient with the screw and other implants from the Stableloc External Fixation System and Small Bone External Fixation System (Small Bone Distractor and Small Bone Fixator) should not receive an MR exam. Failure to follow these conditions may result in injury to the patient.

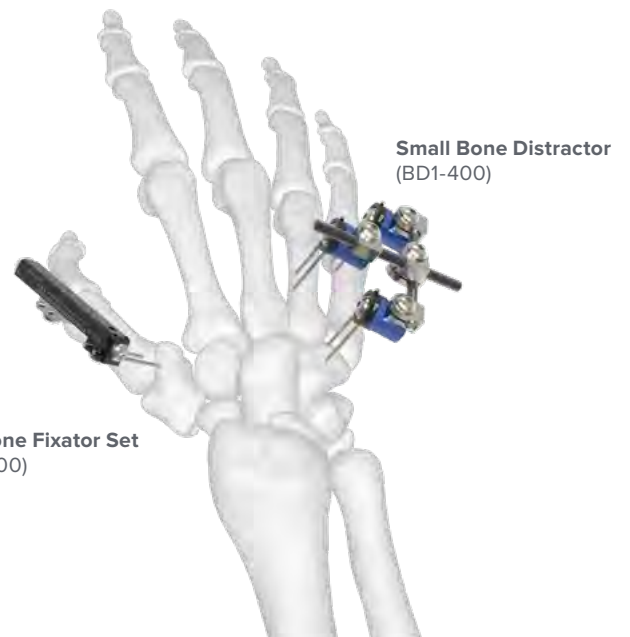

**Stableloc Assembly**  
(FX-4000)

**3.2 mm x 30 mm  
Self-Drilling Pin**

# Scapholunate Repair System

## Conditions for Safe Scanning in the MRI

A patient with the screw implants from the Scapholunate Repair System may be safely scanned at 1.5 T or 3 T under the following conditions. Failure to follow these conditions may result in injury to the patient.

## Scapholunate Repair System

Parameter	Condition
Nominal values(s) of Static Magnetic Field	1.5 T or 3 T
Maximum Spatial Field Gradient	19 T/m
RF Excitation	Circularly Polarized (CP)
RF Transmit Coil Type	Whole body transmit coil
Maximum Whole Body SAR at 1.5 T and 3.0 T [W/kg]	2.0 W/kg
Limits on Scan Duration 1.5 T	N/A
Limits on Scan Duration 3 T	N/A
MR Image Artifact	The presence of this implant may produce an image artifact length of 46 mm $\pm$ 5 mm including the screw and a maximal artifact width of 10 mm $\pm$ 3mm surrounding the screw.
If more information about a specific parameter is not included, there are no conditions associated with that parameter.	

## Scapholunate Repair System

Sterile Part Number	Non-Sterile Part Number	Description
N/A	55-0029	Transrotational Screw, 4.5 mm x 22 mm
N/A	55-0030	Transrotational Screw, 4.5 mm x 23 mm
N/A	55-0031	Transrotational Screw, 4.5 mm x 24 mm
N/A	55-0032	Transrotational Screw, 4.5 mm x 25 mm
N/A	55-0033	Transrotational Screw, 4.5 mm x 26 mm

## Tendon and Ligament Portfolio

- ▶ Acu-Sinch® Knotless Ankle Syndesmosis Repair System
- ▶ PEEK Suture Anchor System

### Conditions for Safe Scanning in the MRI

A patient with the button and washer implants from the Ankle Syndesmosis Repair System may be safely scanned at 1.5 T or 3 T under the following conditions. Failure to follow these conditions may result in injury to the patient.

### Tendon and Ligament Portfolio

Parameter	Condition
Nominal values(s) of Static Magnetic Field	1.5 T or 3 T
Maximum Spatial Field Gradient	20 T/m (2000 gauss/cm)
RF Excitation	Circularly Polarized (CP)
RF Transmit Coil Type	Whole body transmit coil, Head RF transmit-receive coil
Maximum Whole Body SAR [W/kg]	4.0 W/kg
Limits on Scan Duration	4.0 W/kg whole body average SAR for 15 minutes of continuous RF (a sequence or back to back series/scan without breaks)
MR Image Artifact	The presence of this implant may produce an image artifact of 18 mm.
If more information about a specific parameter is not included, there are no conditions associated with that parameter.	

### Acu-Sinch Knotless Ankle Syndesmosis Repair System

Sterile Part Number	Non-Sterile Part Number	Description
46-0023-S	N/A	Acu-Sinch Knotless System w/Inserter 3.5 mm Kit
46-0024-S	N/A	Acu-Sinch Knotless System w/Inserter 3.5 mm
5502-0205-S	N/A	Acu-Sinch Washer 3.5 mm Kit

## Tendon and Ligament Portfolio [continued]

### MRI Compatibility Claim

PEEK is a thermoplastic polymer that is nonconductive, nonmetallic, nonmagnetic with no known hazards resulting from exposure of this device to any magnetic resonance environment, hence the device is considered MR Safe.

### PEEK Suture Anchor System

Sterile Part Number	Non-Sterile Part Number	Description
46-0008-S	N/A	4.5 mm PEEK Suture Anchor Kit
46-0009-S	N/A	5.5 mm PEEK Suture Anchor Kit
46-0012-S	N/A	4.5 mm PEEK Suture Anchor w/o Drill, Tap
46-0013-S	N/A	5.5 mm PEEK Suture Anchor w/o Drill, Tap

## Chest Wall Portfolio

### ► RibLoc® U Plus Chest Wall Plating System

RibLoc U Plus wall plating system **when used for indications on the sternum** is MR unsafe. Otherwise, MR conditional.

### Conditions for Safe Scanning in the MRI

A patient with the screw and plate implants from the RibLoc U Plus Chest Wall Plating System implanted on the rib maybe safely scanned under the following conditions. Failure to follow these conditions may result in injury to the patient.

### Chest Wall Portfolio

Parameter	Condition
Nominal values(s) of Static Magnetic Field	1.5 T or 3 T
Maximum Spatial Field Gradient	40 T/m (4000 gauss/cm)
RF Excitation	Circularly Polarized (CP)
RF Transmit Coil Type	Whole body transmit coil, Head RF transmit-receive coil
Maximum Whole Body SAR [W/kg]	2.0 W/kg
Limits on Scan Duration	2.0 W/kg whole body average SAR for 15 minutes of continuous RF (a sequence or back to back series/scan without breaks)
MR Image Artifact	The presence of this implant may produce an image artifact of 10 mm.

**Note:** MRI Conditional scan parameters are applicable to *rib plating only*. Sternum plating is MRI Unsafe due to temperature rise.

If more information about a specific parameter is not included, there are no conditions associated with that parameter.

## Chest Wall Portfolio [continued]

**MR Unsafe**

A patient with the RibLoc U Plus wall plating system **implanted on the sternum** should not receive an MR exam. Failure to follow these conditions may result in injury to the patient.

**RibLoc U Plus Chest Wall Plating System**

## Craniomaxillofacial (CMF) Portfolio

- ▶ 2.0 Orthognathic
- ▶ OSA™
- ▶ OsteoMed CFx™ Craniomaxillofacial Fixation System
- ▶ OsteoMed MFx™ Mandibular Fixation System
- ▶ OsteoMed ICON™ Facial Plating System
- ▶ 2.0 mm Auto Drive MMF Screws

### MRI Restricted Zone Summary

#### Conditions for Safe Scanning in the MRI

A patient with the screw and plate of 2.0 mm Auto Drive MMF Screws, 2.0 Orthognathic, OsteoMed CFx, OsteoMed ICON Facial Plating System, OsteoMed MFx, or OSA Systems may be safely scanned at 1.5 T or 3.0 T under the following conditions. Failure to follow these conditions may result in injury to the patient. See below for a complete list of part numbers included in these systems.

### OsteoMed's Craniomaxillofacial Products

Parameter	Condition
Device Name	OsteoMed's CMF Products
Static Magnetic Field Strength (B <sub>0</sub> )	1.5T and 3T
MR Scanner Type	Cylindrical
B <sub>0</sub> Field Orientation	Horizontal
Maximum Spatial Field Gradient	23.5 T/m (2,350 G/cm)
Maximum Gradient Slew Rate	200 T/m/s per axis
RF Excitation	Circularly Polarized (CP)
RF Transmit Coil Type	Integrated Whole Body Transmit Coil
Operating Mode	Normal Operating Mode
Scan Duration	Scan duration up to 1 hour without a cooling period when landmarked at or below the navel (as detailed in the <b>MRI Restricted Zone Summary</b> )
Scan Regions	Landmark locations at or below the navel are permissible (as detailed in the <b>MRI Restricted Zone Summary</b> )
Image Artifact	The presence of OsteoMed's CMF and Neuro Products may produce an image artifact of 3.0 cm. Some manipulation of scan parameters may be needed to compensate for the artifact.
Parameters may be needed to compensate for the artifact.

## Neurosurgical Portfolio

- ▶ OsteoMed Fast Flap™ Neurosurgical Fixation System
- ▶ OsteoMed Profile Zero™ Low Profile Neuro Plating System

### MRI Restricted Zone Summary

#### Conditions for Safe Scanning in the MRI

A patient with the screw and plate of OsteoMed Fast Flap Neurosurgical Fixation System, OsteoMed Profile Zero Low Profile Neuro Plating System or Acumed Cranial Mesh may be safely scanned at 1.5T or 3T under the following conditions. Failure to follow these conditions may result in injury to the patient. See below for a complete list of part numbers included in these systems.

### OsteoMed's Neurosurgical Products

Parameter	Condition
Device Name	OsteoMed's Neuro Products
Static Magnetic Field Strength (B0)	1.5T and 3T
MR Scanner Type	Cylindrical
B0 Field Orientation	Horizontal
Maximum Spatial Field Gradient	32 T/m (3,200 G/cm)
Maximum Gradient Slew Rate	200 T/m/s per axis
RF Excitation	Circularly Polarized (CP)
RF Transmit Coil Type	Integrated Whole Body Transmit Coil
Operating Mode	Normal Operating Mode
Scan Duration	Scan duration up to 1 hour without a cooling period when landmarked at or below the navel (as detailed in the <b>MRI Restricted Zone Summary</b> )
Scan Regions	Landmark locations at or below the navel are permissible (as detailed in the <b>MRI Restricted Zone Summary</b> )
Image Artifact	The presence of OsteoMed's Neuro Products may produce an image artifact of 3.0 cm. Some manipulation of scan parameters may be needed to compensate for the artifact.
Parameters may be needed to compensate for the artifact.
